Summary

Software engineer with 3+ years of experience as a Product Engineer, building production systems in TypeScript, React, Node.js and PostgreSQL for 3PL fulfillment and real estate lending. Built a rule engine processing 50,000+ executions daily, a label system handling 10,000+ generations daily, and a packing-station desktop app with 64 scale protocol decoders, most reverse-engineered from proprietary hardware. Also handles customer support and product demos: takes warehouse incidents from first report to a permanent fix while keeping the customer's team informed, and has demonstrated products to investors internationally.

Experience

•Cybership March 2025 - Present
Product Engineer Remote

- Single-handedly architected and implemented the complete Automation Rules engine from scratch (similar to Shopify Flow), enabling merchants to create complex conditional workflows with 50 trigger types, 16 condition operators with conditional & Array operations, and 7 action types. Built a type-safe rule evaluation system using Zod validation that processes 50,000+ rule executions daily across order processing, inventory allocation, and shipping automation.
- Building Cybership Desktop, an Electron packing-station app to replace the third-party PrintNode agent. Reverse-engineered most of its 64 scale protocols from raw serial, USB HID and Bluetooth captures of proprietary scales, and built that capture tooling into the app: it records request and response bytes at any serial setting, replays them through the live decoders and sends the evidence to support. No print is sent twice: PostgreSQL row-lock claims and an audited job state machine on the server, and an fsynced on-device journal that repairs torn writes and fails closed on corruption.
- Owned production incidents that blocked customer warehouses from shipping, taking each from first report through root cause to a permanent fix, often the same day. Repaired live data alongside their teams while keeping them informed throughout, and fed what they ran into back into the product so the failure could not recur.
- Built the entire Shipping Labels system end-to-end, integrating with 5 external APIs including EasyPost, USPS (OAuth2), BukuShip, ShipStation for multi-carrier support (FedEx, UPS, USPS, DHL, Canada Post), and Mapbox for geocoding and route visualization. Implemented PDF generation with pdf-lib, Redis-based caching for rate shopping, webhook management with retry logic, and batch processing capabilities handling 10,000+ label generations daily with sub-2-second average response times and 99.9% uptime.
- Runs day-to-day engineering through multi-agent orchestration in T3 Code and Claude Code, delegating research, implementation and review to parallel subagents. Built agent skills for Cybership work: a PR review agent that checks a branch against the repository's review contract and returns a structured verdict, and a Playwright agent that records video proof of a fix, including terminal runs against simulated provider responses, and embeds it in the PR.

•Nahar OM July 2024 - March 2025
Product Engineer Chennai, India

- Led a team of three on Secondary Trading, a marketplace for fractional units of recurring-revenue loans, and built its entire Django backend: OTP and PAN/GSTIN KYC, wallets, fixed-price and bid trading, eMudhra contract signing, an auto-payment rule engine, an admin buy-back bot and TDS reports.
- Wrote XIRR calculators for four repayment structures, solving a target XIRR back into a price with Brent's method. On the invoice discounting platform, built the ledger and integrated QuickBooks, Zoho and Boost Money.
- Joined and led frontend development of Altern8, a real estate lending platform made with Next.js 14 and Django. Rebuilt its CI/CD, cutting deployment turnaround by an average of 10 seconds and Docker build size 10-fold (2.2 GB -> 178 MB).
- Pitched and demoed both platforms to investors in the US, Turkey, the Netherlands and India.

•DataVerse India August 2023 - July 2024
Product Engineer Kolkata, India

- Built custom CMS websites from scratch for GenieBaazar and Penn State University with Next.js, SolidStart, Express and Hono, acted as their technical point of contact, and hosted them on AWS and Hostinger.

Skills

Languages: TypeScript, JavaScript, Python, Go, Swift, SQL
Frameworks: Next.js, React, Node.js, Express.js, Hono, Django, SolidStart, Electron, AppKit, SwiftUI
Cloud/Databases: PostgreSQL, MySQL, Redis, ClickHouse, AWS (RDS, S3, EC2, Lambda), Railway
AI Engineering: Multi-Agent Orchestration, Claude Code, T3 Code, Codex, Agent Skills, MCP
Practices: REST APIs, Webhooks, OAuth2, Zod, Docker, CI/CD, Production Incident Response
Soft Skills: Customer Support, Product Demos, Public Speaking, Team Leadership

Education

–Bachelor of Technology in Electronics and Communication
Heritage Institute of Technology, Kolkata CGPA: 8.21

–High School
Ramkrishna Mission Rahara, Kolkata Percentage: 91
