Summary

Product Engineer, 3+ years. TypeScript, React, Node.js, Python, PostgreSQL. 3PL fulfillment and lending. Rule engine at 50,000+ runs a day, label system at 10,000+ labels a day, packing-station app with 64 scale protocols, most reverse-engineered. Owns warehouse incidents to a permanent fix.

Experience

•Cybership March 2025 - Present
Product Engineer Remote

- Automation Rules engine, built solo from scratch (like Shopify Flow): 50 triggers, 16 condition operators incl. array ops, 7 actions. Zod-validated evaluation, 50,000+ runs a day across orders, inventory allocation and shipping.
- Building Cybership Desktop, Electron packing-station app to replace PrintNode. Reverse-engineered most of 64 scale protocols from raw serial, USB HID and Bluetooth captures of proprietary scales. Capture tooling in the app: records request and response bytes at any serial setting, replays them through live decoders, sends evidence to support. No double prints: PostgreSQL row-lock claims, audited job state machine, fsynced on-device journal with torn-write repair, fail-closed.
- Production incidents blocking warehouses from shipping: first report to root cause to permanent fix, often same day. Repaired live data with customer teams, kept them informed, fed each failure back into the product.
- Shipping Labels, end to end: EasyPost, USPS (OAuth2), BukuShip, ShipStation for FedEx, UPS, USPS, DHL, Canada Post; Mapbox geocoding. pdf-lib PDFs, Redis-cached rate shopping, webhooks with retries, batch jobs, 10,000+ labels a day.
- Daily multi-agent orchestration in T3 Code and Claude Code. Built agent skills: PR review agent checking branches against the review contract; Playwright agent recording video proof of fixes into PRs.

•Nahar OM June 2024 - March 2025
Product Engineer Chennai, India

- Secondary Trading: led team of 3, built whole Django REST backend. Investors trade fractional loan units at fixed price or by bid. OTP and JWT sign-in, Surepass KYC, wallets with audited transaction log, unit ownership across resales, bidding in DB transactions, eMudhra contracts, repayment rule engine, buy-back bot, TDS reports.
- XIRR engine for 4 repayment structures; solves target XIRR back to price with Brent's method. Ethyx (invoice discounting): built the ledger, reconciled against Boost Money account-aggregator bank statements.
- Altern8: frontend and design, construction lending released in tranches. Resumable onboarding: bank statements (Boost Money), PAN (Signzy), tax returns (Scoreme), RootFi connect for Tally, Zoho, QuickBooks. Budget and timeline uploads into editable tables and Gantt chart. Admin panel approving borrowers, projects, tranches with per-tranche rules. Docker image 2.2 GB to 178 MB.
- Pitched both to investors internationally: loans split into tradable units, two-way XIRR calculator, bid accepted and e-signed, borrower onboarded to tranche approval.

•ProperSKU December 2023 - June 2024
Product Engineer Remote

- Founding engineer; built Shopify inventory-forecasting app for stores and their warehouses across frontend and backend (Next.js, TypeScript, GraphQL, Redis, BullMQ). Wrote the custom auth and multi-tenant permission system: invite-only sign-up cascading across 5 roles (admin, warehouse managers, warehouse users, store owners, store users), role fixed by invite, menus and data scoped per warehouse or store. In-app onboarding, menu locked till done: account, card billing (Visa, Mastercard, Amex), Shopify connect by domain, team invites.
- Reads Shopify orders, line items, products, variants, inventory per location (available, on hand, committed, backordered). Current and historical sales charts by product and SKU with time-range comparisons. Purchase order recommendations: per-variant minimum order quantities for 3, 6, 12 months. Warehouse view of every store with connection status and SKU count; per-account billing and user management.

•DataVerse India December 2022 - December 2023
Product Engineer Kolkata, India

- Custom CMS websites from scratch for GenieBaazar and Penn State University: Next.js, SolidStart, Express, Hono. Technical point of contact; hosted on AWS and Hostinger.

Skills

Languages: TypeScript, JavaScript, Python, Go, Swift, SQL
Frameworks: Next.js, React, Node.js, Express.js, Hono, Django, SolidStart, Electron, AppKit, SwiftUI
Cloud/Databases: PostgreSQL, MySQL, Redis, ClickHouse, AWS (RDS, S3, EC2, Lambda), Railway
AI Engineering: Multi-Agent Orchestration, Claude Code, T3 Code, Codex, Agent Skills, MCP
Practices: REST APIs, GraphQL, BullMQ, Webhooks, OAuth2, Zod, Docker, CI/CD, Production Incident Response

Education

–Bachelor of Technology in Electronics and Communication
Heritage Institute of Technology, Kolkata CGPA: 8.21
